Job Posting Page

Instawork URL Link

Turn first-time recruiter leads into job posts by letting them preview before sign in or payment

Problem & Opportunity

Recruiters who hire a few times a year aren't likely to create an Instawork account just to post one job. Today's flow asks them to sign in and pay before they've seen a finished posting, so the biggest commitment comes at the moment they trust us least. The opportunity is to let them build the posting first and ask for commitment once they have something worth finishing.

My hypothesis: letting recruiters enter job details and preview their posting before sign-in or payment will convert more first-time recruiters into published posts than asking for an account up front. I haven't validated where in the funnel the drop-off happens.

Target User

First-time and infrequent recruiters and hiring managers who aren't on Instawork. Returning, high-volume recruiters aren't the initial focus, since they already have accounts. JTBD: Get this role in front of qualified candidates quickly, without committing to another platform first.

MVP

Job Posting Page is a streamlined posting flow that lets recruiters build a job before signing in or paying.

- **Enter details:** Recruiters add job details first. Only the fields needed to render the posting are required.
- **Preview:** A live preview updates as they type, so the form feels like building something, not filling out paperwork.
- **Build confidence:** A few proof points sit next to the publish step, using only claims Instawork can back with data.
- **Publish:** Sign-in and payment come last, once they have a posting worth finishing. Email is captured before payment, so a recruiter who stalls leaves saved posting and email.

Product Design Concepts

- **Commitment last:** Effort already invested makes finishing cheaper than starting over somewhere else.
- **Price transparency:** If posting costs money, show it next to the preview instead of at checkout, so invested effort doesn't end in a surprise.
- **Verification at publish:** Email and company-domain checks plus light review protect candidate quality without putting a wall back at the start.
- **Minimal fields:** Collect only what the preview needs. Everything else collected after post.

Success Metrics

- **North Star:** Published paid job posts per posting started
- **Supporting:** Start rate, step-by-step completion, time to complete
- **Business impact:** Share of new posts receiving 10+ applicants within a week, repeat posting within 60 days
- **Guardrails:** Spam or rejected posts, payment failures and refunds, support contacts
